PROFESSIONAL SUMMARY:

Software and Embedded Engineering graduate with a Master's in Information Technology (Software Development) and a Bachelor's in Electronics and Communication Engineering. Experienced in building scalable applications using ASP.NET, C# .NET, and React.js while leveraging Azure and AWS cloud services. Demonstrated hands-on expertise in embedded systems through a Raspberry Pi-based biometric authentication project and low-power VLSI design using 45nm CMOS technology, combining strong software capability with hardware understanding.

TECHNICAL SKILLS:

Operating Systems: Windows 10/11, macOS, Ubuntu

Programming Languages: C#, Java, JavaScript, HTML, CSS, Python, Embedded C

Frameworks & Libraries: ASP.NET, .NET Core, React.js, Express.js

Cloud & DevOps: Microsoft Azure, AWS, CI/CD pipelines, Git

Developer Tools: VS Code, Android Studio, GitHub, Slack, IntelliJ

Support & Systems: Remote Desktop, Active Directory (basic), Office 365, PC setup and troubleshooting

Concepts: Full-Stack Development, RESTful APIs, Agile Methodologies, Cloud Deployment, Debugging and Performance Optimisation

EXPERIENCE

Team Lead — Sleep Pattern Recognition (Industry Panel Project).

Jun 2025-Nov 2025

Deakin University

Melbourne, VIC

- Led a team developing a sleep stage recognition system using physiological time series data.
- Built data preprocessing pipelines to clean noisy sensor signals and extract meaningful features.
- Applied machine learning techniques to detect sleep patterns and anomalies.
- Coordinated technical tasks, conducted code reviews, and maintained documentation.
- Delivered validated results demonstrating improved classification accuracy and reliability.

DOTNET Developer

Nov 2022 – Mar 2024

Ensar Solutions

Hyderabad, India

- Trained and mentored 5+ junior developers in C# .NET and React.js, improving code quality and project efficiency by 20%.
- Conducted weekly technical sessions on .NET best practices, API development, and cloud integration.
- Designed and implemented solutions on Azure and AWS, improving application scalability by 35% and reducing deployment time by 40%.
- Optimised cloud performance and costs by reducing server load by 25% through efficient API design and caching strategies.
- Led API development and database integration for Kalibr8, improving query performance by 30%.
- Upgraded LimoLink from .NET Core to .NET 9 with gRPC, reducing latency by 50% and enhancing system responsiveness.
- Achieved 95% test coverage using xUnit and NUnit through rigorous unit and integration testing.
- Reduced bug resolution time by 40% using automated testing, Postman, and Swagger.
- Implemented CI/CD testing in Azure DevOps, enabling reliable deployments with minimal downtime.

PROJECTS

Biometric Authentication System | Raspberry Pi, Embedded Systems

Jan2022-May2022

- Designed and implemented a biometric-based authentication system using Raspberry Pi for secure access control

- Integrated biometric sensors with embedded software to capture, process, and verify user identity.
- Developed secure decision logic to grant or deny system access based on biometric validation
- Demonstrated strong hardware–software integration and debugging

Sleep Stage Recognition | *Python, Machine Learning.*

Jun2025-Nov2025

- Developed a sleep pattern recognition system using EEG and ECG time-series data.
- Implemented machine learning models to classify sleep stages and detect abnormalities in sleep cycles.
- Evaluated model performance using accuracy, F1-score, and confusion matrices.

Online Shopping Website | *HTML, CSS, Blazor, C# (.NET).*

Apr2024-May2024

- Designed and developed a full-stack shopping website with product browsing, cart, and checkout features.
- Built responsive frontend using HTML, CSS, and Blazor for an better user experience.
- Developed backend using C# (.NET) to handle user requests, product management, and order processing.
- Integrated database for storing user accounts, products, and transaction records.
- Implemented form validation, error handling, and secure data handling practices.

Technical Seminar:Satellite Communication & Networking.

Nov2021-Dec2021

- Prepared and presented a technical seminar analysing SpaceX's Star-link LEO satellite constellation and its role in global broadband connectivity.
- Evaluated challenges in rural internet access in India
- Explained system components including satellites, ground stations, and user terminals, and discussed benefits, limitations, and future scope of LEO networks.

2-BitMagnitude Comparator (45 nm CMOS) | *VLSI Design, Tanner EDA Tools*

Sep2021-Dec2022

- Designed a two-bit magnitude comparator using a hybrid approach combining Pass Transistor Logic (PTL), Transmission Gate Logic (TGL), and Conventional CMOS (C-CMOS) in 45 nm technology.
- Modelled and simulated the circuit using Tanner S-Edit and T-SPIICE, performing DC analysis and waveform validation
- Compared the proposed design with existing state-of-the-art comparators on delay, power, and Power Delay Product (PDP), achieving improved performance.
- Analysed trade-offs in transistor count, driving strength, and power consumption, demonstrating strong understanding of low-power VLSI design principles.

EDUCATION

Deakin University(CGPA-3.3)

Master of Information Technology

Melbourne, Australia

Dec2025

Specialisation: Software Development

Relevant Coursework: Block-chain Development,Object-Oriented Programming,Web-development,SQL ,Mobile-APP development,Software Quality and Testing

Jawaharlal Nehru Technological University

Bachelor of Technology in Electronics & Communication Engineering

Hyderabad, India

Aug2022

Specialised :in VLSI Design and Satellite Communication
